I am both a full-stack developer and an accountant by training. I graduated with two 1st Class Honours Degrees in Accountancy and Business Analytics from Nanyang Technological University, Singapore and a MBA from Baruch College. I have a Graduate Certificate in Technopreneurship and Innovation from Nanyang Technological University.

I previously worked in Fujitsu's cloud computing department, Tokyo Japan and Singapore's Central Bank's (MAS) fintech division on Project Ubin, distributed ledgers and a stablecoin used for market clearing with the central bank under [Toh Wee Kee](#). I also worked in KPMG Singapore's Digital Trust Department on projects involving IT security audits.

In 2021, I set up my own floral boutique school in Singapore. I have sole-proprietor publish a noir-thriller novel that is listed for borrowir Singapore.

Project Ubin: Central Bank Digital Money using Distributed Ledger Technology

What It Is

Project Ubin is a collaborative project with the industry to explore the use of Blockchain and Distributed Ledger Technology (DLT) for clearing and settlement of payments and securities.

The project aims to help MAS and the industry better understand the technology and the potential benefits it may bring through practical experimentation. This is with the eventual goal of developing simpler to use and more efficient alternatives to today's systems based on central bank issued digital tokens.

February 2026

ABSTRACT: We use granular dark web data to infer cyber incidents and link them to capital market outcomes. We find that dark web activity increases before cyber breaches are disclosed, suggesting that many breaches occur substantially earlier than reported. Consistent with capital market awareness, information asymmetry and informed trade rise during periods of elevated dark web activity prior to cyber breach disclosure. Next, we identify firm-level periods of heightened dark web activity with no subsequent breach disclosure, which we term "shadow breaches." These episodes exhibit similar characteristics to disclosed breaches, are associated with increased information asymmetry and informed trading and are followed by negative stock returns. Using dark web activity to identify an adjusted event date, we find a negative market reaction around the adjusted breach date, but not around the disclosure date, suggesting that dark web activity preempts breach disclosure. Lastly, we find that breach activity is more likely to be disclosed in high-tech industries and among firms monitoring the dark web. Our findings support the usefulness

The screenshot shows a search results page from an academic database. At the top, there are navigation links for 'Certified Analytics Professional', 'INFORMS Connect', 'Career Center', and '2026 INFORMS Healthcare Conference'. The main header includes the 'INFORMS PubsOnLine' logo and a search bar containing the text 'darknet'. Below the header is a blue navigation bar with links for 'MAGAZINES', 'PUBLICATIONS', and 'PRICING & SUBSCRIPTIONS'. A search bar below this contains 'darknet' and a 'SEARCH' button. On the left, a 'Search Filters' sidebar shows 'Information Systems Research' as a filter. The main content area displays 'Results: 1 - 5 of 5 for "darknet"'. The first result is titled 'Shedding Light on the Dark: The Impact of Legal Enforcement on Darknet Transactions' by Jason Chan, Shu He, Dandan Qiao, and Andrew Whinston, published in 'Information Systems Research' in March 2024. It is marked as 'Free Access' and includes options for 'Full-text', 'PDF (3261 KB)', 'Supplementary Material', and 'Permissions'. The page also features a 'Refine Search' dropdown and 'Per Page' and 'Sort' options.

What is the market equilibrium design of darknet markets?

What is the optimal form of escrow in trustless markets?

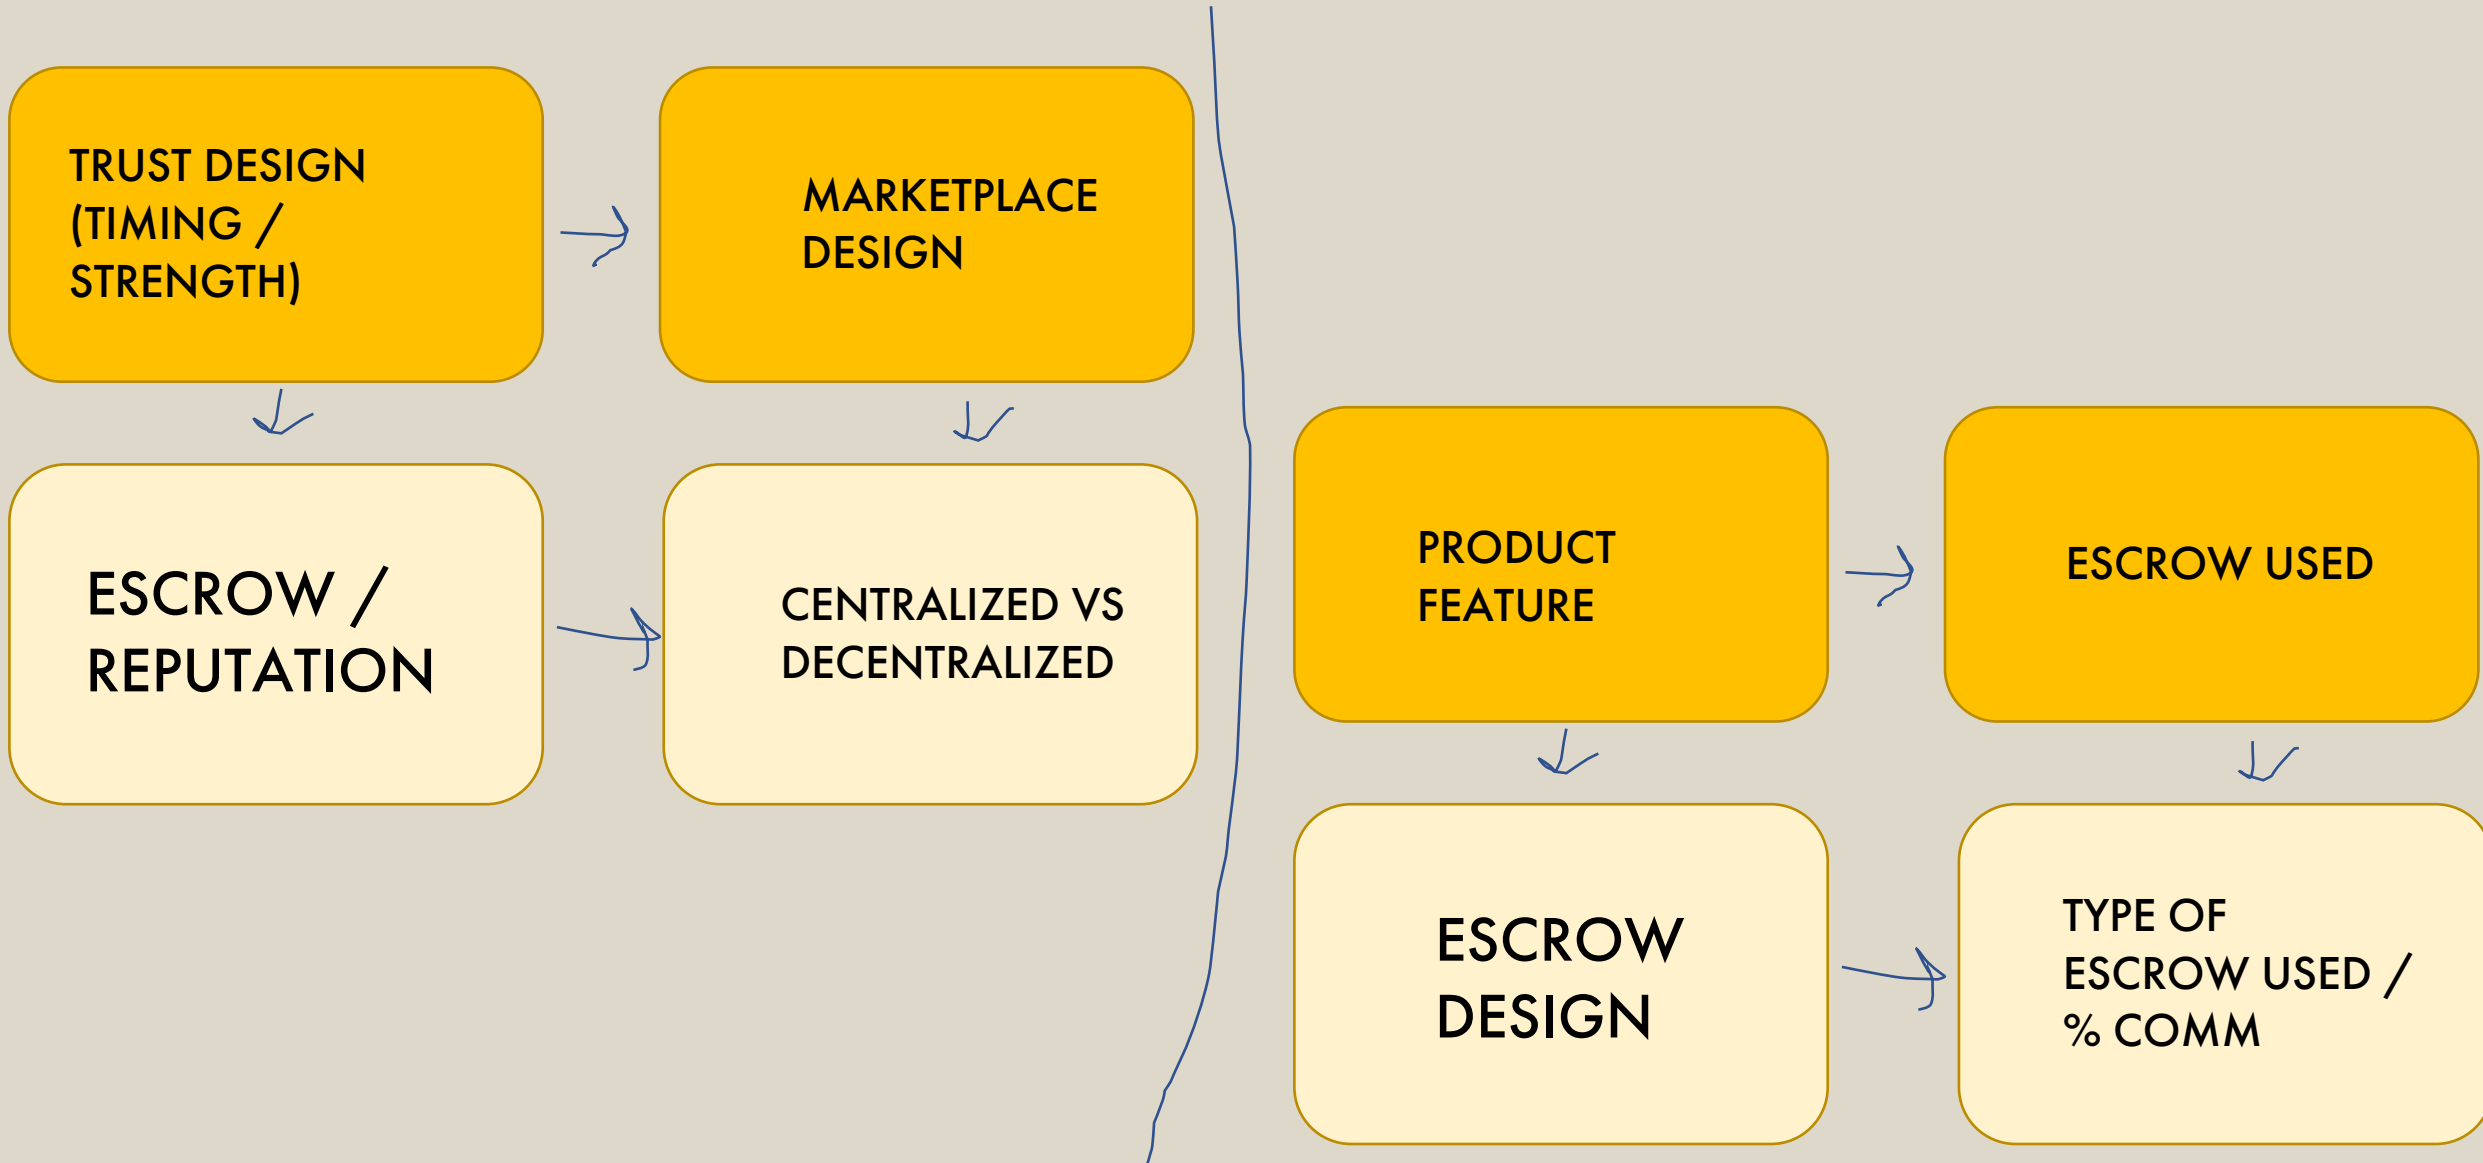

**WHY IS THIS
IMPORTANT?**

1. Characterizing how trustless trades take place on darknet
2. Characterizing market design equilibrium of darknet
3. Optimal escrows are good-specific
4. Help our understanding in settings with weak governance

We are offering KYC Verifications legally handmade for many accounts and Openbullet Configs for your needs. Prices ranges between \$20 and \$200 for all of these accounts, so just ask me about the price and I will reply! Negotiable, looking to do cheap prices of all of these. I'm doing also CUSTOM verifications for other platforms or apps. Crypto Accounts: Paxful AlchemyPay Bit2Me Coinbase Moonpay Noones Kraken Kucoin Paybis Binance Bybit Nexo Cex.io Huobi Wallets & Banks Accounts Skrill Pst.net Wirex Zen.com Lydia Paytend PaySafeCard WeststernCard Other Accounts *CENSORED* Every of this acount included ID back front selfie and the other documents used to verify it Mail access and phone access. I do accept escrow for any of these. If you re interested DM/PM me and I will reply in under 15 minutes! - 3rd Feb 2024

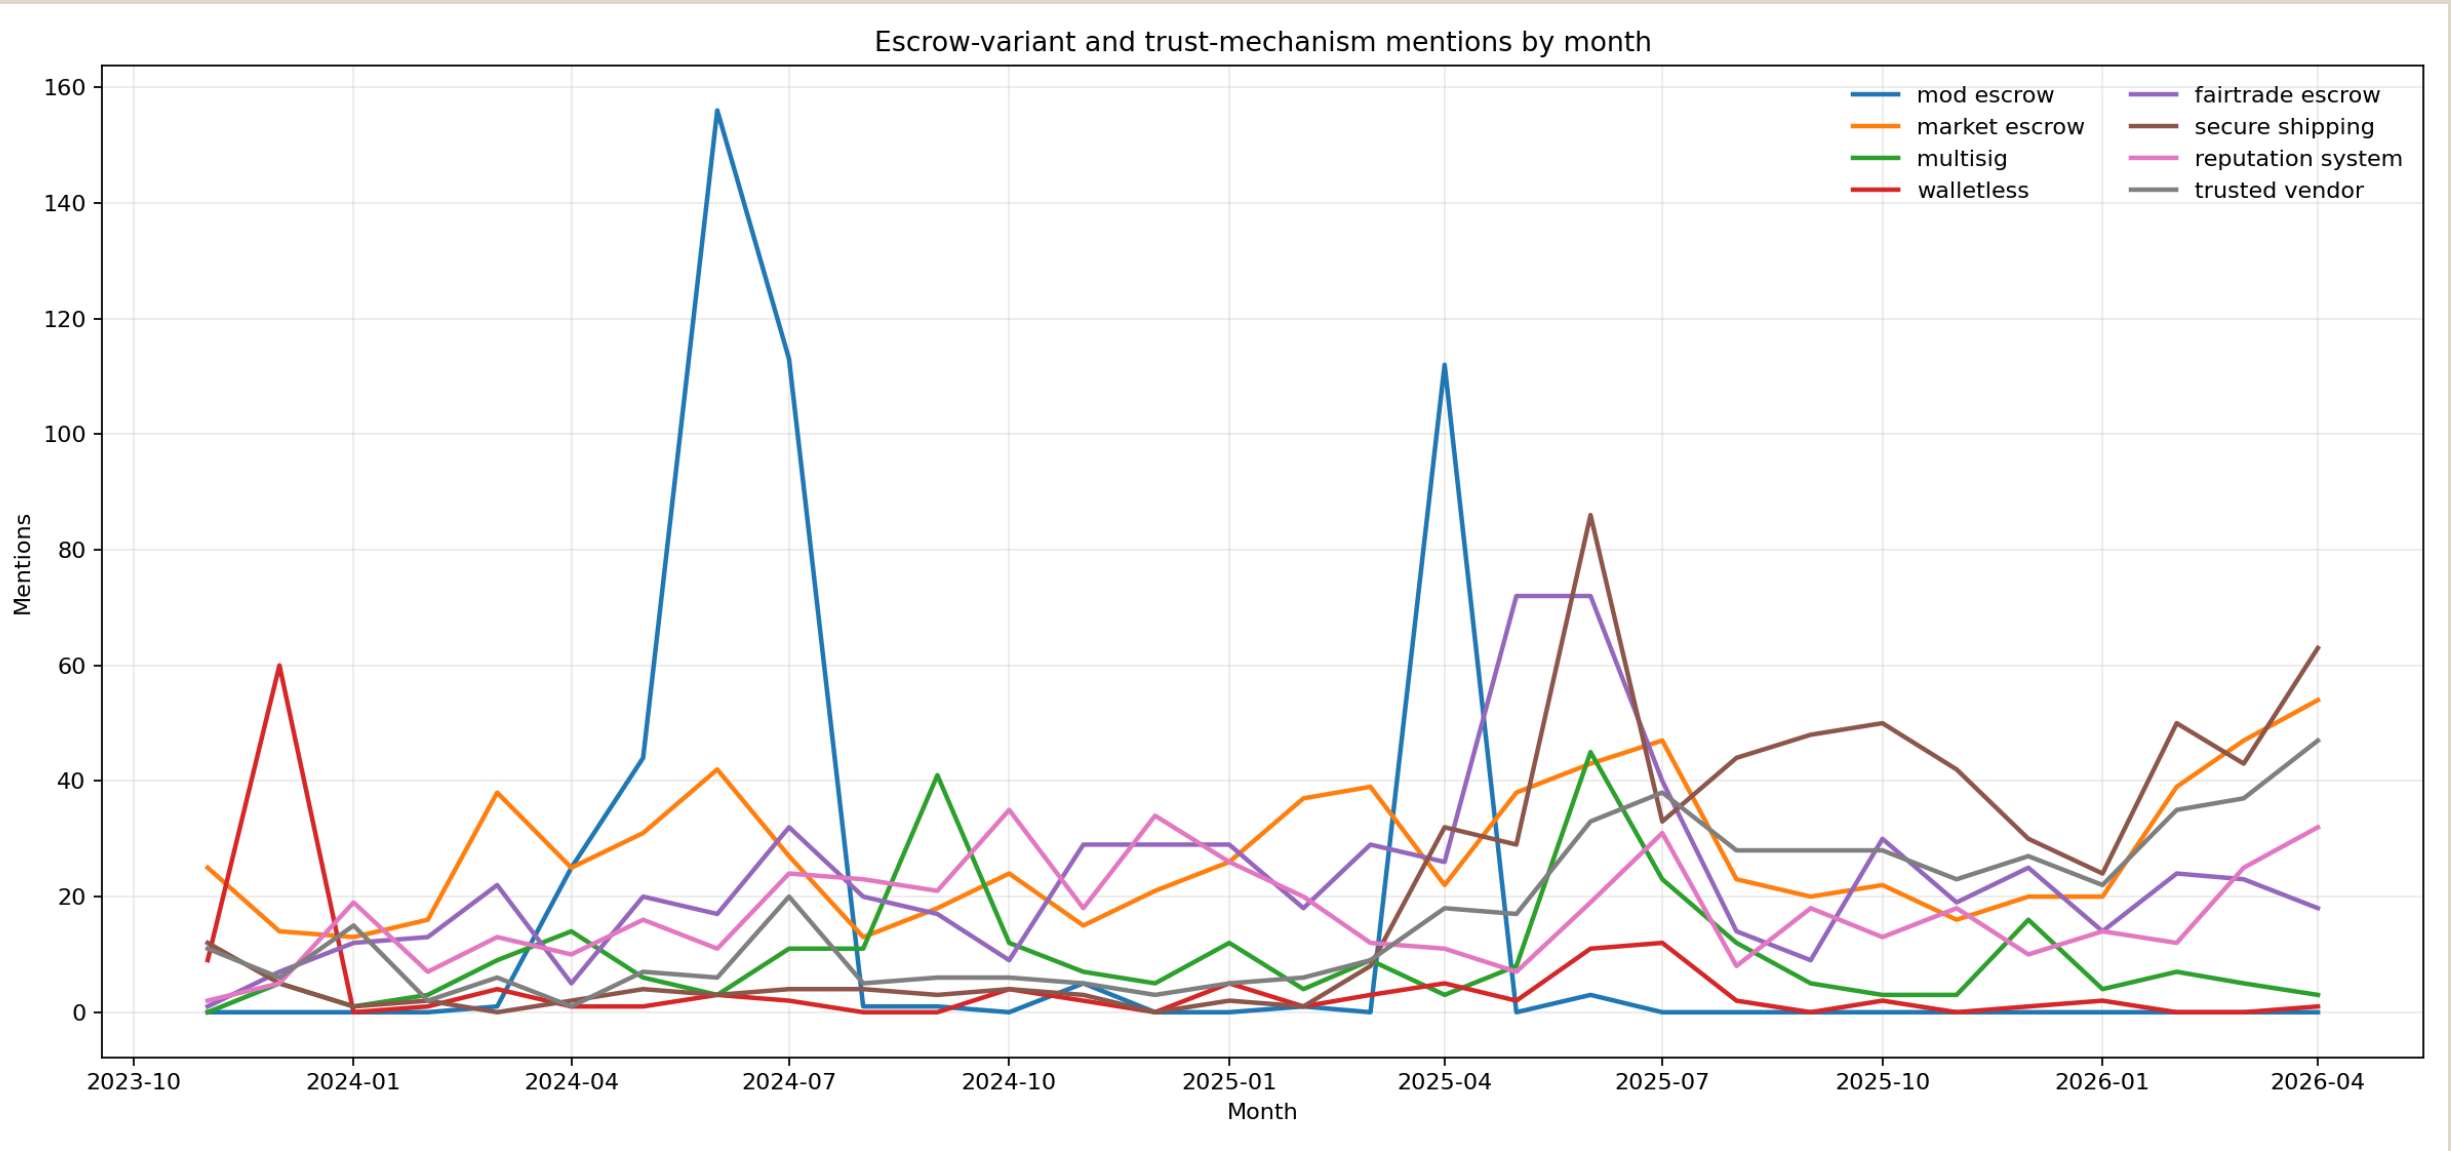

So I met this guy on dread /u/Mudbrothers refered me to a guy who sells logs, the guy claims he used a bunch old dnm's in the past but doesn't anymore, his name is Expovendor on TG. He sells logs that are from Canada and US even if he lives in Canada but does not accept escrow because he did for 7 years and only does direct deals now, he offered: Bank Logins Balances \$2-4K - \$100 \$5-10K - \$150 \$10-20K - \$200 \$30-50K - \$250.

<https://dump.li/i/e594e3.jpeg> <https://dump.li/i/540043.jpeg>
Did anyone ever buy from this guy and is he legit? I don't want to get scammed. He also claimed he can walk me through step by step how to bypass 2fa and cashout. - 19th Dec 2025

Escrow affords you some protection. DD offers the vendor protection. Not all markets are unstable. Sure Bohemia is having an issue but countless others are not. You should reveal the scammer's user name - 18th Dec 2023

1. Threads from several major darknet forums
 1. With escrow keywords
2. Sales postings from centralized marketplaces
 - Chronology of rise and decline of decentralized and centralized
 - Escrows tied to different listings (percentages, types)

Thank you
